

CeMAT RUSSIA 2022 (September 20-22, Tuesday-Thursday).

CeMAT RUSSIA 2022: substitution, search for new partners and suppliers is the key theme of the exhibition

From September 20 to 22 the leading international exhibition for materials handling, warehousing equipment and logistics services CeMAT RUSSIA will be held at the Crocus-Expo IEC in Moscow. The trade show will be located in two halls and outdoor area. The main topics will be substitution, reorientation to new markets and the search for new partnerships.

More than 130 exhibitors from Russia and abroad will present their technologies on an area of over 9,000 m². In 2022, the presence of Russian companies at CeMAT RUSSIA will significantly increase, which, thanks to the high-quality development of the exhibition, will be able to find alternative markets and strengthen their positions in Russia. Compared to last year, the Russian participation will increase by 30% and amount to 107 companies. Moreover, 42 exhibitors take part at CeMAT RUSSIA for the first time. This fact once again confirms that b2b exhibitions demonstrate optimistic growth and continue to be the most important component of a successful business.

The exhibition presents products of more than 200 brands. Among the participants of CeMAT RUSSIA are: COMITAS, Medved, Trayana, Logitehnika, Photomechanics, Newest Technologies, IQSKLAD and many others. Thanks to the colossal opportunities to enter the Russian market that have opened up in recent months, CeMAT RUSSIA demonstrates a strong presence of companies from China: JAC, Noblelift, Huazh, LiuGong, HELI - the largest manufacturers will present a worthy replacement for European products. Also in 2022, 8 new participating companies from China are exhibiting at CeMAT RUSSIA.

The exhibition booths will traditionally demonstrate new unique solutions in the field of warehouse automation, solutions for organizing the work of a warehouse and intralogistics complex, as well as well-known models of machinery and equipment that are most in demand in Russia.

Thus, Wayzim presents a sorting line, the accuracy of which can reach 99,99% and the operating speed is 3,2 m/s. The developer AxTeam presents the integrated planning system In.Plan, created in combination of the knowledge and experience of leading international platforms. JAC invites visitors to get acquainted with the most popular models of equipment: loaders, stackers, electric pallet trucks. ATEUCO invites you to its booth, where you can test the presented models of data collection terminals under conditions close to real.

For the second time, CeMAT RUSSIA will host companies representing transport packaging, packaging equipment and automation tools for packaging processes. They are grouped under the TRANSPACK section. Packaging solutions will be presented by companies such as Gotek, one of the largest developers and manufacturers of corrugated packaging in Russia, Polica Prof with anti-slip sheets, Sealed Air, Benoplast, NECO-LINE and others.

In parallel with the trade show an extensive three-day business program will be held.

The activities of the program answer three main questions: what practices in the market have proven their effectiveness in the current conditions of uncertainty, what managers need to consider when revising the development strategy of their companies, what to rely on when planning the work of the logistics department in the near future.

Heads of leading companies in the country will share their best practices and solutions: NLMK, Mikoyanovsky Meat Processing Plant, Petrovich, Knight Frank Russia, M.Video network, PickPoint, Belevskaya Confectionery, Ostankino Meat Processing Plant, Magnit, X5 Group, Detsky Mir.

The co-organizers and partners of the business program and the exhibition are Coordination Council on Logistics (CCL), Logistics magazine, SCM Academy, the Russian-Chinese Chamber for the Promotion of Trade in Machinery and Innovative Products, Concept Logic, PIM Solutions, Digital Control Technologies, VeeRoute Consulting, DKC, Reksoft, Comitas, Inloker, SBER Robotics and other companies.

The main topics of this year are: import independence and technological import substitution of European suppliers, novelties of the Russian intralogistics market, new solutions that provide an advantage to e-commerce and production logistics, cooperation with China, and planning automation tools, and the best practices of retail logistics. On the last day of CeMAT RUSSIA, the grand finale of the second season of the Strong Link logistics show, an intellectual supply chain tournament, will take place. The business game will be attended by young graduates of St. Petersburg State University of Economics and teams of experts from leading companies in Russia.

The general partner of the CeMAT RUSSIA exhibition is the first international system integrator on the Russian market, COMITAS, which celebrates its 15th anniversary in 2022.

The 12th international exhibition for materials handling, warehousing equipment and logistics services CeMAT RUSSIA will be held from 20 to 22 September 2022 at the Crocus Expo IEC, Pavilion 1.
